

AT&T Digital Life Data Usage Allowance Policy

Your AT&T Digital Life alarm monitoring and automation services use the AT&T Mobility LLC wireless data network and your broadband service. For signals that go across the AT&T wireless data network, AT&T Digital Life has included a fixed amount of data, at no additional charge to you, a monthly data allowance. While there is no charge, you may notice a data usage summary on your bill.

If your wireless data usage exceeds this fixed data allowance which is the average usage of the typical AT&T Digital Life customer, we may contact you with questions about the way that you are using your AT&T Digital Life service. If we contact you, we expect you to timely respond to our customer care agents and provide us with any requested information so that we can continue to provide you with exemplary service and make adjustments, if necessary, to our data usage forecasting. Also, the AT&T Digital Life Customer Agreement requires you to maintain broadband service in your home, and excessive wireless data usage may occur if you have not complied with this service condition. Failure to maintain broadband service can result in a service termination.
